Kin'a (Kenna) Tooling with GitHub Actions

06/17/2022

Kenna Security is
now part of Cisco.

Presenters:

Caleb Eckenwiler

Customer Success
Manager

Lewis Onyejiaka

Software Consulting
Engineer

Katie Kolon

Customer Success
Operations Manager

Agenda

- ▶ Review – The Kenna Toolkit
- ▶ Use Case for GitHub Actions
- ▶ Getting Started
- ▶ Demo
- ▶ Q&A

<https://github.com/KennaSecurity/toolkit>

Review - The Kenna Toolkit

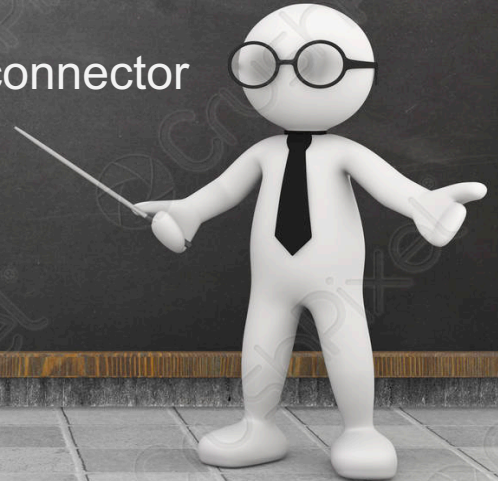

Toolkit Trivia

- Think of the Toolkit as a suit of tools for bringing/ingesting data into Kenna
- Comes as a self-containing container
- The additional connectors are available as tasks
- Each task's README page show what parameters each task needs to run
- Data ingest is done via a Kenna Data Importer (KDI) connector

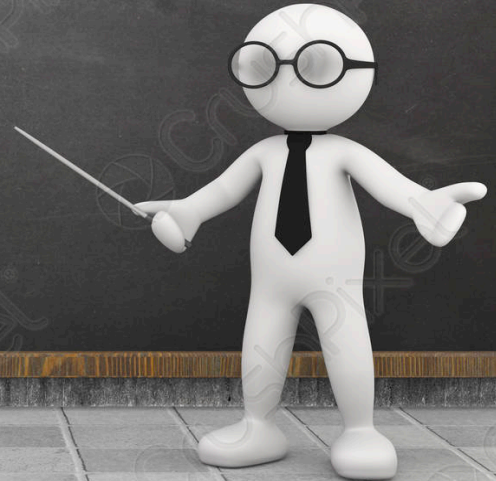

Getting Started Kenna-side

- ✓ Know your tasks
- ✓ Have your scanner platform credentials
- ✓ Factor in any scanner settings
- ✓ Do not forget the Kenna connector
- ✓ API keys – admin please
- ✓ Full speed ahead

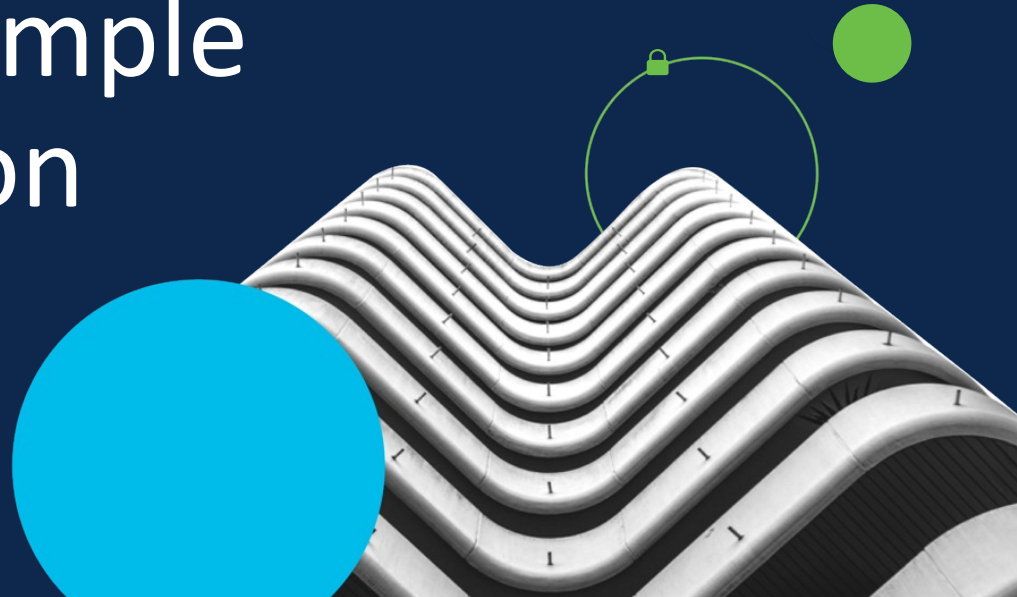

Getting Started GitHub-side

- ✓ Be security-aware - Use Private repositories
- ✓ Securely store keys and Credentials
- ✓ Create workflow directory
- ✓ Grab the template
- ✓ Tweak the template
- ✓ Action away

Demo with a Sample GitHub Action
